PROFESSIONAL SUMMARY

Data & Analytics professional with 6+ years turning large, messy datasets into governed, decision-ready insights. As the first data hire at a fintech, I built the analytics and reporting infrastructure from zero and became the guardian of data quality — designing audit and reconciliation routines, running root-cause analysis, and establishing a Single Source of Truth trusted across the company. Strong in data storytelling: I translate raw operational data into actionable insights, operational trends, and clear feedback loops for business and operations teams. Trilingual communicator (EN/ES/PT) and an early adopter of AI tooling — I build my own AI agents and automations to accelerate quality and reporting work. Eager to apply this quality-first, analytical mindset to CX quality assurance, calibration, and continuous improvement.

CORE SKILLS

Quality & Governance: Quality Auditing & Reconciliation, Root-Cause Analysis, Data Governance, Single Source of Truth, KPI / Metric Frameworks, Standards Adherence, Continuous Improvement, Calibration-style Alignment

Analytics & Storytelling: Advanced SQL (CTEs, window functions, stored procedures), Data Modeling (star schema), ETL/ELT, Pattern & Trend Analysis, Actionable Insights, Executive Reporting

BI & Data Tools: Power BI (DAX, Power Query/M), Tableau, Databricks, Python (pandas, NumPy, scikit-learn), Git; quick to adopt CX tooling such as Looker & Zendesk

AI & Automation: AI agents, Google Apps Script automation, Claude Code, prompt engineering, automated QA & reporting workflows

Collaboration: Requirements gathering, stakeholder alignment, cross-functional partnership, feedback loops, action-plan development

EXPERIENCE

Senior Data & BI Analyst — First Data Hire | Ável Investimentos (Fintech) · Remote, Brazil 2020 – Present

- Joined as the company's first data hire and built the analytics and reporting infrastructure from the ground up, establishing a Single Source of Truth that became the reference for decision-making across the business.
- Own the full quality cycle for company reporting: audited and reconciled legacy and manual reports, traced discrepancies to their root cause, and defined standards and controls to guarantee accuracy, consistency, and usability.
- Analyze large volumes of data to identify patterns, spot both excellence and areas for corrective action, and turn findings into KPIs, operational trends, and actionable insights for business areas.
- Developed, evolved, and supported dashboards and reports in Power BI (DAX, Power Query/M) and Tableau, applying data storytelling to make complex data clear for non-technical stakeholders.
- Built and optimized advanced SQL and Python ETL pipelines to integrate multiple sources into governed layers on Databricks.
- Partnered with business and operations teams to gather requirements, present results, and translate them into targeted action plans — a continuous feedback loop for improvement.
- Championed AI and automation internally, building agents and scripts to accelerate quality checks and reporting.

Financial Products Advisor | GuiaInvest · Brazil

Jan 2020 – Apr 2020

- Supported clients on a digital investment platform, monitoring product performance and handling customer interactions with a service-quality mindset.

Banking Operations Advisor | Banrisul · Brazil

2018 – Jan 2020

- Operated in a regulated banking environment handling transaction data, compliance, and operational performance — early, hands-on exposure to standards adherence and quality controls in customer-facing processes.

SIDE PROJECTS — AI, AUTOMATION & WEB DEVELOPMENT

- AI Agents & Automation: built a portfolio of AI agents (a WhatsApp assistant for clinics, a financial-analyst agent, and a variable-compensation automation) plus internal Google Apps Script bots — including “Junior,” a Google Chat monitoring bot, and an automated weekly report that tracks keyword mentions across multiple channels. Actively explore automated QA and pattern-analysis workflows.
- Web Development: build websites for small businesses with Vite/React and Claude Code — including a configurable clinic-site template backed by a ~49-lead prospecting pipeline (Google Maps data extraction) and an e-commerce site for a personalized-products store.

EDUCATION

Bachelor in Economics PUC Minas · Brazil	2025 – Present
Bachelor in Economic Sciences UNISINOS · Brazil	2019 – 2022
